Introduction

This education system framework is built on the principle that students are the core of the education system. It is also built on the principle that everyone in the education system, including teachers should be treated fairly. This means that this framework creates a human-centric but effective education system that prepares students for adulthood. It also provides students with the opportunity for social connection. This education framework is built on multiple domains, learning methods and already existing systems. This is built on existing systems because otherwise this would be too difficult to adopt. Existing systems already have some benefits for everyone currently in the education system. This education framework also allows schools to meet legal requirements such as the GDPR and Children Act 1989 and 2004.

While this education system framework cannot provide a perfect education system, it can provide a human-centric, honest, and constantly improving one. This is because another core principle of this framework is that education isn't a one-time process. In this framework, education is defined as the continuous and structured process of learning. Make sure not to fully trust this education system framework as it may be wrong in some areas. It is important to make sure to adapt this framework to legal requirements, school funding, and your own needs. Remember to implement one section at a time as not all sections can be implemented at once.

The spider diagram above shows a visual layout of the principles that the education system framework was built with. These principles can be seen throughout the sections below.

How To Study Effectively Domain

- This domain will aid students in learning effectively during self-study or perhaps even in class.
- This domain is important because sometimes time spent in lessons isn't enough for students to learn.
- It is also important because some students may prefer to teach themselves.
- There are currently 5 main ways that students currently could learn in school environments and in general.
- The first way is through active recall.
- This is where students actively answer questions only using memory.
- This is important because it allows students to recall more information in the long-term.
- This method can be done through flashcards, doing tests, self-quizzing or study groups where students ask each other questions.
- The second way is spaced repetition.
- This is where students review topics between gradually increasing intervals.
- For example, a student may learn a topic and then review it 2 days later and then 4 days later.
- This is important because it increases student's long-term memory of concepts.
- This can be done through digital tools like Anki, Quizlet, Carousel learning, or adaptive self-quizzing.
- The third way is visual learning.
- This is where students learn by seeing visual representations of concepts.
- For example, a student may understand a topic more easily if it's presented in a diagram.
- This is important because it breaks down complex equations or systems into a format that students may be able to more easily understand.
- This method can be done through the usage of diagrams, charts, mind maps and videos.
- The fourth way is auditory learning.
- This is where students learn concepts or information mainly from listening.
- This is important because it allows students to perform other tasks while also learning new information from audio sources.
- This can be done through spoken explanations, discussions and podcasts.
- The final way is kinaesthetic learning.
- This is where students learn concepts through physical activity and real implementation.
- This is important because it strengthens problem-solving skills of students.
- This can be done by building models, conducting experiments and role-playing.
- It is important to choose learning methods based on your own needs as a student.
- These are only the main ways to learn; there may be other ways students learn

AI Usage Domain

- This domain aims to aid students in using AI effectively as a tool instead of a crutch.
- This domain is important because AI can be used as a tool to explain concepts and quiz students.
- Currently, most students use AI to complete homework or cheat on exams instead of doing the work themselves.
- This could be because the student may feel lazy or they don't know how prompt AI correctly.
- There is one AI prompt structure that I recommend.
- This AI prompt structure is for learning.
- The first step in this structure is greeting.
- This isn't mandatory but it configures your brain to be professional.
- The second step in this structure is topic.
- This is where you tell the AI exactly what topic you want to learn.
- For example, the topic could be algebra with linear equations for GCSE Maths.
- The third step is learning structure.
- This is where you define how you want to learn the topic.
- For example, I want you to explain the equations and then test me by giving me questions one at a time to recall the information.
- The fourth step is learning progression.
- This is where you define the difficulty of the questions that the AI gives you.
- For example, I want you to start off with 5 basic questions. After these questions are completed, I want you to provide me with 3 immediate questions.
- The fifth step is marking.
- This is where you define how you want the AI to mark your answers and provide you with feedback.
- For example, for marking, I will provide my answer for the question. You will mark it against GCSE Maths standards. If I'm correct, we move onto the next question. If I'm incorrect, you give me one hint at a time with 3 hints in total. If I still fail to get the solution, then you will provide me with an explanation.
- The final step is confirmation.
- This is where you ask the AI to repeat the instructions you gave to ensure its understanding.
- For example, before we start this session, you will tell me step by step what we are doing. Do not start the session until I say so.
- Make sure to adapt this AI prompt structure as needed.

Anonymous Systems Domain

- **This domain aims to aid schools and colleges in setting up anonymous systems that students and teachers can use for anonymous reporting.**
- **This domain is important as students and teachers currently may feel that they can't snitch or report abuse without fear.**
- **Currently, most schools' systems require you to report harassment or bullying to specific people.**
- **This isn't effective because both students and teachers may face violence or abuse from those who bullied or harassed them.**
- **I recommend a human-centric but efficient solution to this problem.**
- **The system should be set up where students and teachers can report harassment and bullying where they aren't identified easily.**
- **This system should be mainly digital but can be physical if digital resources aren't available.**
- **For example, a student may be able to log into their student portal and have an option for anonymous reporting.**
- **This system should also be monitored by safeguarding teams, and no attempts should be made to identify the student or teacher.**
- **The only exception to identifying the reporter should be in immediate danger to the life of the student or teacher.**
- **Safeguarding team should investigate every case but there should be rate-limiting of reporting to prevent spam.**
- **If there were to be a fake report, then the reporter if found should receive consequences.**
- **This system is effective because it protects the student or teacher's identity.**
- **This system also allows for compliance with the Children's Act 1989 & 2004 as it protects students from harm through reporting.**
- **The system also helps schools comply with the Human Rights Act 1998 which in a school context means that students and teachers must be protected from inhumane or degrading treatment which includes bullying and harassment.**
- **However, this system isn't perfect because sometimes bullies or abusers may still be able to find out that the victim reported them.**
- **Make sure to adapt this anonymous system structure based on school funding and resources.**

Security For Schools Domain

- This domain aims to help schools and colleges keep student and staff data secure from unauthorised access.
- This domain is important because currently schools and colleges are the targets of multiple attackers today.
- There are 3 main protections that schools and colleges may implement to protect student data.
- The first protection is strong account authentication.
- This means that school or college protect both student and staff accounts.
- This can be done through MFA, password policy, RBAC, password managers for administrators, and recovery codes.
- MFA should be through authentication app or email-based MFA if authentication app cannot be set up.
- RBAC in this case is limiting permissions that students and some members of staff have to school or college resources.
- Recovery codes should only be reserved for administration and IT teams.
- The second protection is Wi-Fi security.
- This means that the school or college protect both the school's internal network from unauthorised access.
- This can be done through Wi-Fi security protocols, secure protocols, VLANs and detection systems.
- Wi-Fi security protocols include WPA3 and WPA2.
- The personal versions are easier and cheaper to set up but require more OPSEC and management of the network passwords.
- The enterprise is more expensive and more difficult to set up due to requiring a RADIUS server and adding specific credentials to the network.
- Secure protocols can include SSH, FTPS and the latest version of SMB.
- VLANs are separating network traffic on a network into different sections.
- For example, there may be separate networks for IT devices, teacher computers and student computers.
- The third and final protection is OPSEC and security awareness.
- This means that schools must train staff on basic security awareness and OPSEC when handling student data.
- This can include recognising the signs of phishing or other suspicious activity on devices.
- This also means training staff on handling student data like not sharing it with any specific students or anyone that doesn't work within the school.
- This domain helps schools comply with the GDPR and Data Protection Act 2018 as they are protecting student data from unauthorised access.
- This domain does not mention all protections that a school or college can use.
- More security protections and information can be found in my security repo.

Assessment And Grading Domain

- This domain aims to help schools and colleges assess student ability properly and fairly.
- This domain is important because assessment and testing of skills allow for improvement within education processes.
- Currently, schools and colleges mainly assess students in 2 ways.
- The first way is through theory or written exams.
- This is where students must complete all questions given with a time limit.
- Written exams are currently the main way that students are assessed in both school and college environments.
- The second way is coursework.
- Coursework is where students physically complete a task such as making meals in food technology or creating sportswear in design and technology.
- Coursework is currently mainly seen in college courses and some GCSE courses.
- This framework recommends that assessment should be used to provide information about a student's capability which then can be used to help the student improve.
- Students should be warned at least 3-4 weeks before the assessment period starts.
- This is because it gives students and teachers time to prepare and adjust their learning approach for the assessment period.
- Assessments should cover all subjects and shouldn't be crammed into a few days
- This is because it avoids cramming and reduces the stress and exam pressure that a student may experience.
- If possible, assessment may also cover coursework by testing cooking skills, creating designs or playing a certain musical piece.
- During the assessment, students should be given a quiet but decently spacious area to do the exam.
- Strict examination rules such as no phones, no labels on water bottles, and no talking should be made clear to students and should be enforced by invigilators.
- This is because this allows students to focus on answering the questions while also reducing the chances of cheating.
- After the assessment, teachers in each department should mark and review the results of the assessment.
- This should be done by multiple teachers and students are allowed to ask for remarks or retakes if they feel that the marking was unfair towards them.
- Remarks should be done by a different teacher instead of the teacher who originally marked the paper.
- Retakes should be done with the same rules as normal assessments.
- The results of the assessment should be used to help students improve.
- This can be done by looking at the consistent weak concepts among students and adapting lessons based on those. Teachers can also cover concepts based on student requests.

Curriculum Design Domain

- This domain aims to aid schools and colleges in making a fair but effective curriculum for students.
- This is important because this curriculum is a major factor in how well a student may perform during assessment.
- Currently, school curriculum can be crammed, and students may feel limited in what they can learn and the activities they can do.
- This is because schools feel the need to perform for inspections in fear of getting ratings such as improvement or inadequate.
- Lower ratings may lead to less funding for the school which can cause teachers to lose their jobs or less extracurricular activities.
- This framework recommends a fair, effective and compliance-ready structure that schools and colleges can use and adapt to their own needs.
- The first step of this structure is to identify learning objectives.
- This is where schools must define what are the specific and measurable objectives that must be achieved by the end of the academic year.
- This can include average student grades, assessments and lesson criteria.
- The second step of this structure is deciding subject learning methods
- This is where schools decide how students are taught concepts and skills within lessons.
- This can include visual presentations, spoken explanations and physical activity.
- More information on learning methods can be found in the How to Study Effectively domain.
- The third step of this structure is resources and funding.
- This is where schools identify and organise the amount of funding and resources available.
- This can be done by organising funding into categories like essentials, staff wages and required third-party software that the school may use.
- The fourth step is deciding what extra-curricular activities students can do.
- This is where schools based on funding and resources decide what after-school clubs there are.
- Some extra-curricular activities can include football, basketball, debating, robotics or cooking.
- The final step is assessment.
- This is where schools decide the frequency of assessments, how marking will be done and where assessments will be done.
- School or college curriculum should be reviewed using data like student performance, student council proposals and extracurricular attendance.
- This process should be repeated at the end of every academic year.
- This structure helps schools comply with the Education Act 1996 as it allows them to comply with inspections and creates a safer and more enjoyable environment for students.

Emotional Support Section

- This section aims to help schools to emotionally support both students and staff members.
- This is important because currently students and staff especially those who are victims of abuse bear their weight alone.
- Currently, students and staff receive little to no emotional support.
- There are 5 steps to my structure of providing emotional support to students and staff members.
- The first step is detection.
- This is where the need for emotional support is identified.
- This can be done through the anonymous reporting system, digital or physical.
- It is important that safeguarding teams or counselors do not pressure a student or member of staff into getting emotional support.
- The only exception is when there is an active attempt of self-harm or suicide.
- The second step is offering.
- This is where the need for emotional support is addressed.
- This can be done by talking to the student or staff and agreeing on meetings or certain changes to support them emotionally.
- It is important that safeguarding teams or counselors listen to the needs of the student or staff and make the needed changes within reason to support them.
- The third step is supporting.
- This is where the student or staff member is directly emotionally supported.
- This can be done by having conversations in private rooms about how the student feels, allowing certain equipment or a student buddy.
- It is important that the student or staff feels comfortable and that support must go at their own pace.
- The fourth step is documenting.
- This is where the safeguarding team or counselors document the emotional issues and what methods actively worked.
- This can be done using the structure what (What is the emotional issue?) → Why (Why has the student experienced this?) → How (How was the need for support identified?) → Support (What helped the student?).
- The fifth step is monitoring.
- This is where the safeguarding team or counselors observe and check in on the student to make sure they aren't experiencing any major emotional issues.
- It is important that this monitoring doesn't feel intrusive to the student or staff members.
- It is also important to make sure that the safeguarding team and counselors are supported emotionally as well.
- This section allows schools to comply with the Children Act 1989 & 2004 and Health and Safety at Work Act 1974.

Student Conditions at School

- This section aims to help schools make sure that students can learn in a safe and bearable environment.
- This section is important as students should be safe, fed and supported while learning.
- Currently, sometimes students can feel unmotivated, uncomfortable, unsafe and even imprisoned while learning.
- There are 4 main student conditions schools should focus on providing.
- The first condition is food.
- This is important because students should have food available to them to keep them energised and because access to food is a human right.
- Schools should make sure that all students are fed or at least have access to food during lunchtime.
- If possible, school lunches should be free for students that may not be able to afford it.
- School meals should be prepared by kitchen staff about 2-3 hours before lunchtime starts.
- The second condition is toilet access.
- This is important because students cannot focus on learning while needing to go to the toilet.
- Teachers should allow students to go to the toilet on their own during class.
- The student should not have to beg extensively, explain, or even have a medical condition just to use the toilet.
- Students with medical conditions should also be allowed to head to the toilet multiple times if needed.
- The third condition is temperature control.
- This is important because students cannot focus on learning while they are too hot or too cold.
- For heating, schools may close windows, use radiators, or have warmer student uniforms and allow students to stay indoors during breaks.
- For cooling, schools may open windows, use air conditioning, fans, allow students to wear uniform without jumpers or long sleeves, and can provide water to students.
- The fourth condition is break and rest time.
- This is important because students need a break or a chance to rest after learning new content.
- Schools may allow for a 20–30-minute break between lessons to let them interact or play around.
- Lunchtimes should be at least 50-60 minutes long to allow students time to eat and talk to each other.
- This section allows schools to comply with the Children Act 1989 & 2004, Human Rights Act 1998.

School SEND Support Section

- This section aims to help schools support students with disabilities or any special needs.
- This section is important because students with disabilities or special needs deserve to have a chance to learn like everyone else.
- Currently, schools do provide some support to those with disabilities or special needs, but there are a few areas for improvement that this framework addresses.
- This framework has a 5-step framework to aid SEND students.
- The first step is detecting.
- This is where schools see the signs of a student requiring extra support
- This can be done through SEND teams or teachers seeing the signs in class or the student or their guardian directly reports a need for SEND support.
- The second step is identifying.
- This is where schools give a diagnosis based on the signs and note down the symptoms observed during the first step.
- This can be done through talking to the student themselves, their guardian, and any teachers who teach them in class.
- It is important that the student doesn't feel like there is something wrong about themselves.
- The third step is supporting.
- This can be done by helping the student learn by providing extra teacher support in lessons, using a laptop, or having something to play around with.
- SEND teams should also use the approach of preparing the student for adulthood instead of trying to control the environment for them.
- This can include allowing the students to do group activities, being in controlled uncomfortable environments, and teaching them essential motor skills.
- It is important that the support goes at a comfortable pace as these can be more difficult compared to the average student.
- The fourth step is documentation.
- This is where schools document the special needs and what helped the student the most.
- This can be done through EHCP plans with the structure What (What was the special need?) → Why (If applicable why does special need exist?) → How (How was the special need identified?) → Support (What methods helped the student?).
- The final step is monitoring.
- This is where schools monitor to make sure that the SEND student continues to get the support they need to learn effectively.
- This can be done by having annual review meetings and checking in on the student.
- This section allows schools to comply with the Equality Act 2010.

School Routine Section

- This section is designed to help schools structure students' average routine while in school.
- This section is important to ensure that students learn effectively while also not feeling imprisoned or too exhausted.
- Currently, schools can have a rigid routine of 6 lessons a day with about 2-3 breaks which can lead to 6-7 hours of school time a day.
- This structure proposes a 3-step structure for planning school routines.
- The first step is the morning routine.
- This is where schools decide what time students must be into school by, how many lessons in the morning, and how many breaks.
- Primary schools and secondary schools should start somewhere between 8:30 and 9:00 in the morning.
- Further education such as colleges can decide based on when lessons start for each course which could be different every day.
- There should be only 2-3 lessons in the morning with a 20–30-minute break between them.
- It is important to not overload students in the morning as they may still be waking up especially since it can be exhausting to be in school for 6-7 every day.
- The second step is afternoon.
- This is where schools decide what time students have lunch, how many lessons they have in the afternoon, and how many breaks there are.
- Lunchtime in primary and secondary schools should be at 12:00 and end at 2:30 so all years can get a meal.
- Students should have 1-2 lessons in the afternoon depending on what time they ate and when the school day finished.
- The school day should finish between 15:00 – 15:30 to ensure that there is still time for extracurricular activities and so students can have time to rest.
- The third step is extracurricular clubs and after school routine.
- This is where schools decide how much homework the student is given and what time extracurricular clubs start and finish.
- Students in Year 7-9 should be given about 3-4 pieces of homework on separate days of the week focusing on the main subjects of maths, English, science, or any extra GCSE exams done in Year 10.
- Students in Year 10-11 should be given the correct pieces of homework based on the subjects they do for GCSE.
- Each student should be allowed 1-2 weeks with extra time if the student has special needs or if they have a valid reason for needing it.
- Extracurricular clubs should start after school and at least one hour before the school closes.
- The section helps schools comply with the Education Act 1996 and Children Act.

Student Punishment Handling Section

- This section is designed to help schools make sure that students receive fair and reasonable punishment that allows them to learn from their mistakes.
- This section is needed because it is important for students to understand the consequences of breaking rules which is the equivalent to breaking laws as an adult.
- Currently, schools punish students through suspension, detention or expulsion without allowing them to learn their lesson.
- There are 5 steps to handling student punishment that this framework suggests.
- The first step is defining.
- This is where schools define what the school rules are and communicate these rules clearly with the students for understanding.
- This can be done through administrators and teachers agreeing on rules that are fair and reasonable, using assemblies to communicate with students and define punishments based on the rule that was broken.
- The second step is identifying.
- This is where teachers or students report a student breaking a rule.
- For example, this rule could be using their phone during class.
- Students can do this through anonymous reporting while teachers may directly witness and act.
- Bullies or abusers may try to frame victims through anonymous reporting.
- The third step is verification.
- This is where teachers, safeguarding team or SEND teams verify if a rule has been broken.
- This is important to prevent bullies or abusers from framing victims.
- This step can be done by reviewing camera footage, asking multiple other students, and hearing both sides of the story.
- If two or more students are fighting each other physically, then teachers must contain the situation and then verify.
- The fourth step is punishment.
- This is where teachers decide punishment based on the rule broken.
- The student should get a chance to explain themselves before the teachers decide on a consequence.
- This punishment could be detention after school, suspension or expulsion with a task that encourages reflection.
- This punishment should not take up a student's lunch time as all students deserve to eat even when they have done something wrong.
- The fifth step is documentation.
- This is where schools document the punishment process.
- This can be done through the structure what (rule broken) → identification (How was it found out) → Punishment (What punishment was given?).

Student Power Systems Section

- This section is designed to help schools to ensure that students have a voice and power over certain educational decisions.
- This section is important because students deserve to have autonomy over their own decisions and it prepares them for adulthood.
- Currently, schools have implemented student power systems, however students do not have much of a voice and adults still heavily guide decisions.
- This section will focus on 2 main student power systems used in most schools.
- The first student power system is class representatives.
- Class representatives are students from each class that represent and make sure the needs of their classmates are heard.
- Elections should be open and fair to all students in the class.
- Candidates should be given time to prepare a speech for the class on why they should be class representative.
- After all speeches are completed, all students should be given 1-2 days to vote for the candidate they want to represent them.
- This voting can be done anonymously through a form where name or email isn't required.
- After voting is complete, the teacher or form tutor can count the votes and tell the class who is representing them.
- If the candidate does not want to represent, then the candidate with the second most votes will be allowed to represent.
- Class representatives can then push on class-specific needs to teachers or the student council.
- If a class representative was to quit at any point, another election can be called for someone else to represent the class.
- The second student power system is student councils.
- Student councils are members who are elected by other students across different years that make changes for things such as extracurricular clubs, certain physical changes, and sometimes certain school rules.
- Elections should be open and fair to all students in the school.
- Candidates should be given time to prepare a speech for their year specifically on why they should represent their year.
- These speeches can either be done in front of the year or online where voters can read the speeches.
- Once the council members are elected, they can start drafting and debating over proposals for changes.
- Once a proposal is agreed on, a faculty advisor can review it and only veto if it is harmful or unreasonable for school budget.
- More information about student power systems can be found in my student power systems document.

Teacher Training Section

- This section was designed to help schools train teachers effectively to help students learn.
- This section is important because teachers need to be trained on how to help students learn content during school hours.
- Currently, schools do train teachers well, however, usually teachers cannot teach students using more than one method.
- There is a 4-step structure that schools can use to train teachers.
- The first step is preparation.
- This is where schools decide when training occurs, who does the training, and what content is involved in the training.
- This can be done when creating the curriculum, allowing more experienced teachers and head of departments to guide training sessions.
- Training should include using multiple methods to teach students.
- The second step is separate training.
- This is where schools perform teacher training on the teacher training days outside of school hours.
- This training can include security awareness training, simulated classroom environments, punishment situations, and SEND support training.
- For example, a teacher may be asked to show an example of handing out a consequence for a student having their phone during class.
- This is important to ensure that teachers understand the processes of teaching and have a more fair and instinctual response to rule breaking.
- The third step is active training.
- This is where schools perform teacher training directly in class environments during active schools' hours.
- This can be done by having new teachers act as assistant teachers helping students and even teaching the class for some duration of the class.
- Teachers already have active training as they teach students 4-5 days a week for long durations.
- It is important that new teachers do not teach Year 11 as they need more experienced teachers due to GCSE examination.
- The fourth step is documentation.
- This is where schools document the process of training effectively.
- This can be done through the structure What (What was done in the training?) → How (How was the training done?) → Strengths (What went well?) → Weaknesses (What went wrong?) → Potential improvements (What could be improved?).
- It is important that teachers aren't trained too regularly as it can lead to burnout.
- This section helps schools comply with the Working Time Regulations 1998 Act.

Teacher Conditions Section

- This section is designed to help schools allow for teachers to teach in a safe and fair environment.
- This section is important as teachers are also human beings like students just older and deserve to be treated fairly.
- Currently, teachers can be exhausted and sometimes scared as they are vulnerable to abuse.
- There are 3 conditions that schools should focus on providing teachers with.
- The first condition is food & water.
- This is important because teachers cannot teach on an empty stomach or while thirsty.
- Food & water is also a human right which also allows for schools to comply with the Human Rights Act 1998.
- Schools should provide the teachers the chance to eat during the school day. These lunches can be provided by the school, or teachers can bring in their own food.
- The second condition is rest.
- This is important because teaching dozens of students during the day can be exhausting for teachers.
- Teachers cannot teach students effectively if they are exhausted or burned out.
- Schools should provide the teachers with breaks during the school day so they can rest.
- These breaks could happen when the teacher has a free period of a lesson and teachers should also be able to go home after completing work for the day.
- The third condition is safety.
- This is important because teachers should feel safe while teaching students during active school hours.
- Teachers cannot teach students effectively if they must constantly scan around for threats or teach in fear.
- Schools can provide physical measures like doors & locks, safeguarding team, and serious consequences to any student who may attack a teacher.
- Serious consequences prevent students from harming teachers because for them it isn't worth the risk and most of the time students don't want to harm teachers.
- This section allows for schools to comply with Health and Safety at Work Act 1974.
- This is because it is actively protecting and keeping teachers safe from harm and abuse.
- It also allows for compliance with the Working Time Regulations 1998 Act.
- This is because it is making sure that teachers have fair working hours and have breaks in between these working hours.

Staff Conditions Section

- This section is designed to help schools allow for staff to work in a safe and fair environment.
- This section is important because staff members like IT, janitors, kitchen and support staff are also humans and deserve to be treated fairly.
- Currently, staff members especially IT can be burned out by the amount of work they must do and be treated unfairly.
- There are 4 conditions that schools should provide staff members with.
- The first condition is rest.
- This is important because staff roles can be exhausting especially IT who must manage security and hundreds or even thousands of accounts on a network.
- By allowing staff members to rest, schools can comply with legal requirements such as Health and Safety at Work Act 1974 as they prevent collapses from exhaustion.
- Schools can meet this condition by providing staff members with breaks, rotation schedules, and fair working hours.
- The second condition is safety.
- This is important because staff roles can be quite dangerous at times for example, IT members may face doxxing or support staff may face aggressive students.
- By allowing staff members to feel safe and comfortable in school during active hours, schools can comply with the Data Protection Act 2018 and Health and Safety at Work Act 1974.
- Schools can meet this condition through the anonymous reporting system, physical security measures, and security awareness training.
- The third condition is food & water.
- This is important because staff members deserve to eat food and drink water like students and teachers can.
- By allowing staff members to have the time to eat and drink, schools can comply with the Human Rights Act 1998.
- Schools can meet this condition by providing food & water in the staff room and support for those who may not be able to properly afford it.
- The fourth condition is temperature control.
- This is important because staff roles can work in extremely hot environments especially during the summer.
- For example, kitchen and IT staff may experience more heat in the summer due to equipment that naturally produces heat when used.
- By allowing staff members to have cooling systems or heating systems, schools provide a more comfortable experience during active school hours.
- Schools can meet this condition by providing AC, fans, radiators, and allow for summer clothing as well.

Inspection Model Section

- This section is designed to help inspection systems inspect schools effectively but also constructively.
- This section is important as inspections make sure that schools stay legally compliant and that schools remain as safe and fair as possible.
- Currently, schools perform well for a few days to pass inspections and inspections usually result in provide schools with a rating instead of feedback.
- This section will use pre-existing models like Ofsted inspections in England.
- This section defines a 4-stage model that inspectors like Ofsted can use.
- It is important that all schools are inspected depending on their rating, some schools may be inspected less frequently, however, all schools should still be inspected.
- The first stage is pre-inspection.
- This is where inspectors plan out routes for transport, alert the school of their arrival beforehand, and prepare an inspection team.
- This can be done by using Google Maps or other mapping software, emailing the school a few hours prior, and defining roles and responsibilities for each inspector.
- This stage is important because it doesn't allow schools to have time to prepare and it allows for inspectors to be prepared.
- The second stage is inspection.
- This is where inspectors perform the inspection process while in the school.
- This can be done by watching classes, talking to students and teachers privately, and reviewing school records especially SEND and behavioural records.
- This stage is important because it allows for inspections to view school processes from multiple angles which prevents bias.
- The third stage is post-inspection.
- This is where inspectors provide the school with a rating and give constructive feedback instead of just the rating.
- This can be done by providing a report to the school about benefits, weaknesses, and potential improvements that the school can implement.
- This is important because schools get to know what they are doing correctly, where they are doing it wrong, and how to improve it.
- The fourth stage is documentation.
- This is where the inspection process is documented by the inspectors.
- This can be done through the structure What (What was found in the inspection) → Duration (How long did the inspection last?) → How (How was the inspection done?) → Strengths (What was strong about the inspection?) → Weaknesses (What was weak about it?) → Improvements (What could be improved?).
- This section supports compliance with Education and Inspections Act 2006 as inspectors provide constructive feedback to schools helping them improve.

Contingency Planning Section

- This section is designed to help schools plan for dangerous situations such as fires, data breaches and shootings.
- This section is important to ensure that schools are prepared directly for these situations instead of reacting to them.
- Currently, schools perform drills for fire and sometimes lockdowns, however these instructions can be rigid and difficult to remember in real situations.
- There is a 7-step contingency planning structure that schools can use.
- The first step is to calm down.
- This can be done through taking deep breaths or quickly taking out anger.
- This is important to help reduce the emotional noise of the situation
- The second step is identifying.
- This can be done by looking at your surroundings and clearly labelling the situation and threats around.
- This is important as it allows staff members to understand the situations around them and respond accordingly.
- The third step is containment.
- This can be done by disconnecting devices, evacuating students and staff or locking classrooms.
- This is important because it contains the immediate damage preventing an attacker or the danger from causing further harm.
- The fourth step is clear roles and responsibilities.
- This can be done by giving students and staff members clear roles and responsibilities during each situation.
- This is important to make sure that each student and staff have something they can easily remember and follow during the stressful situation.
- For example, students have the responsibility to hide during lockdowns.
- The fifth step is investigation.
- This can be done by working with law enforcement, interviewing staff and students and reviewing logs.
- This is important to ensure that there are no persistent threats to the school.
- The sixth step is public notification
- This can be done by using social media or other communication channels to alert parents and provide available information from the investigation.
- The seventh step is documentation
- This can be done using the structure what (What situation occurred?) → Why (Why did it happen?) → Response (What was the response?) → Strengths (What was good about the response?) → Weaknesses (What was weak?) → Improvements (What could be improved?)
- This section allows for schools to comply with the Children Act 1989 & 2004 and Health and Safety at Work Act 1974.

Parent Conditions Section

- This section is designed to help schools give parents a voice in how their children are taught and supported.
- This section is important because parents are the ones who enrol their children into the education system and they deserve to have control over their child's safety.
- Currently, schools provide parents with some voice and allow for communication over safety and support, however this could be reinforced.
- There are 3 conditions that schools should provide parents with.
- The first condition is Communication.
- This condition is important because parents should be able to communicate to the school about student safety or support concerns.
- If schools allow parents to communicate, they can reduce parent anxiety, worry, or stress over their child. It also increases parent trust in the school.
- School can meet this condition through social media, school website with phone numbers, or emails for safeguarding teams.
- The second condition is transparency.
- This condition is important because parents should be able to know where they are sending their children to learn.
- If schools allow for parents to see how students are protected, supported, and taught then it can increase the chances of parents sending their children to that school.
- By meeting this condition, schools also increase parent trust which is important for the school to maintain and earn.
- Schools can meet this condition by posting OFSTED ratings and having pages on the school website for SEND support, safeguarding, and learning processes.
- Schools can also use parent portals to allow parents access to student academic statistics and data. They could also use it to directly understand how their child is specifically supported.
- The third condition is voice.
- This condition is important because parents should be able to have a say or choice in how their child is supported, taught, and protected.
- If schools allow for parents to view or have an impact on educational decisions, then it can increase parent trust and provide the school with a trustworthy and transparent reputation.
- Schools can meet this condition by using polls, anonymous reporting of issues, and optional meetings where certain matters are discussed between teachers and parents.
- This section allows schools to comply with the Children Act 1989 & 2004 as it allows parent involvement in keeping students safe.
- It also allows schools to comply with Education Act 1996 as parents have a right to be involved and informed of decisions or processes affecting their child.
