

TEACHER TRAINING AND ORGANISATION DOCUMENTATION

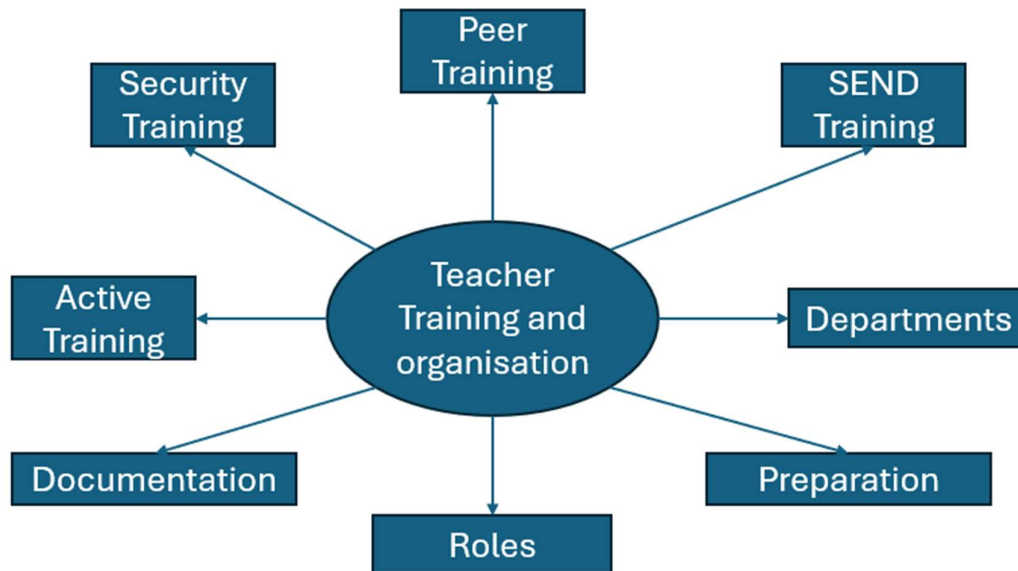

Contents

Introduction	2
Teacher Training Section	3
Staff Organisation Section	4

Introduction

This teacher training and organisation document is designed to help schools train teachers effectively and organise members of staff in clear roles. This document was also designed to provide a template training and organisation that schools can use for their own cases. This document was developed as it is important for teachers to be trained effectively to teach students to their maximum ability. This document will cover teacher training, organisation methods, training workflow and trade-offs.

This teacher training and organisation document cannot promise perfect training or organisation of staff members. However, it can promise to improve teacher training and organisation within schools. This is because it will provide structured steps and processes that everyone, including staff themselves can understand. It is important to also remember that implementation will be different for each school. Make sure to adapt structures and processes to school resources and budget.

This spider diagram above shows some of the processes involved in both teacher training and organisation. We can see that the training process involves active training, SEND training, security training, peer training, documentation and preparation. For the organisation processes, we can see role-based allocation through departments and roles. The diagram does not show all the processes involved in training and organisation. More details can be found in the section below.

Teacher Training Section

- There is a 5-step structure that schools can use to train teachers.
- The first step is preparation.
- This is where schools decide when training occurs, who does the training, and what content is involved in the training.
- This can be done when creating the curriculum and allowing teachers to guide training.
- Training should include using multiple methods to teach students.
- The second step is separate training.
- This is where schools perform teacher training on the teacher training days outside of school hours.
- This training can include security awareness training, simulated classroom environments, punishment situations, and SEND support training.
- SEND support training can be done by EHCP case workers and safeguarding teams to allow teachers to support SEND students effectively
- For example, a teacher may be asked to show an example of handing out a consequence for a student having their phone during class.
- This is important to ensure that teachers understand the processes of teaching and have a more fair and instinctual response to rule breaking.
- The third step is active training.
- This is where schools perform teacher training directly in class environments during active schools' hours.
- This can be done by having new teachers act as assistant teachers helping students and even teaching the class for some duration of the class.
- Teachers already have active training as they teach students 4-5 days a week for long durations.
- It is important that new teachers do not teach Year 11 as they need more experienced teachers due to GCSE examination.
- The fourth step is documentation.
- This is where schools document the process of training effectively.
- This can be done through the structure What (What was done in the training?) → How (How was the training done?) → Strengths (What went well?) → Weaknesses (What went wrong?) → Potential improvements (What could be improved?).
- It is important that teachers aren't burned out by training
- The fifth step is repeating
- This is where schools repeat the process of training teachers or staff.
- This can be done according to schedule, for any new teachers or staff members or if there is an immediate need of training.
- This step is important because it ensures that teachers are trained frequently and that new teachers can have a structured and effective training process.

Staff Organisation Section

- **Staff Organisation is important to ensure there is no confusion in responsibilities.**
- **There are 3 methods that schools can use to organise staff.**
- **The first method is using departments.**
- **This is where schools split up roles into clear categories that are easier to understand and allocate.**
- **This can be done by allocating categories based on the subject or role that the staff members perform.**
- **For example, schools may have English, IT, Maths, Science, History, Geography and PE department**
- **However, schools may struggle to use departments due to staff shortages, lack of resources and staff having to perform multiple roles.**
- **This method improves organisation as it allows staff members to know clearly what their responsibilities and allows for more freedom within their roles.**
- **The second method is using roles for each staff.**
- **This is where schools assign each staff member with a clear role and responsibilities.**
- **This can be done through job descriptions which must clearly define what the staff member must do and what department they are in.**
- **For example, there are 3 main roles that schools can provide to staff members.**
- **The first main role is teacher.**
- **A teacher's role is to teach students the skills and knowledge needed for adulthood, and they are assigned a department based**
- **The second main role is IT team member.**
- **An IT team member's role is to maintain the school's technical systems and protect student & staff data from unauthorised access.**
- **The third main role is safeguarding member.**
- **A Safeguarding member's role is to protect students and staff members from abuse and harm while on school grounds.**
- **These roles improve organisation as teachers understand clearly the role they have been allocated and the responsibilities that come with it.**
- **The third method is nested roles**
- **This is where schools assign a specific role within a department or within a generic role like teacher.**
- **This can be done by assigning a specific role based on experience or exactly what the staff member does.**
- **For example, an IT team member could have the role of security specialist while another one has the role of software developer.**
- **This improves organisation as staff members can have specific roles allowing for more targeted responsibilities and clear leadership structure.**
